

ALGATON

Promoter of vegetative growth based on algae and amino acids

- **Stimulates vegetative growth**
- **It favors overcoming stoppages of stress-induced growth**
- **It promotes the absorption of the active ingredients associated**

COMPONENTS

Ascophyllum nodosum extract , amino acid complex.

MECHANISM OF ACTION

Thanks to the synergy between the active principles contained in algae and amino acids, **ALGATON** :

- **stimulates cell division and relaxation** (biopromoters with auxino-, cytokine- and gibberellino-like algae action);
- **stimulates the recovery of cellular metabolism by** stimulating protein synthesis (amino acids);
- **it has a vein effect** as it creates around active ingredients that are associated with a physically compatible organic structure that facilitates absorption by plant tissues (amino acids).

APPLICATION

FOLIAR-IRRIGATION

MISCIBILITY

The product has no miscible contraindications with other formulations except those based on Copper and Sulfur, mineral oils and emulsions. It is recommended that you always carry out small tests to verify its compatibility.
